

# 5 Ways to Improve Care and Cost Efficiency

## Utilize NPs and PAs

Staffing models that include qualified nurse practitioners and physician assistants help to reduce clinician costs, share the workload, and increase throughput.

## Look for Outside Patient Care Opportunities

Dive into patient care outside the hospital's four walls through post-acute care offerings, telehealth services, and employee wellness programs.

## Prioritize Patient Experience

Work with your clinicians and staff to enhance the patient experience through effective communication, accurate and supported documentation, and promoting productivity.

## Optimize Standardization of Care

Leverage the skills, experience, data, and leadership of all care team members to reduce variations and create material improvements in value.

## Maximize Resources with Strategic Partnerships

Partner with those who share your values to explore collaborative opportunities, create more access points for health care consumers, provide additional services, and reduce administrative burdens.
